

Leading-Edge Care for Traumatic Brain Injury & Spinal Conditions

Wyoming Spine and Neurosurgery

Contributing to the design of a motorcycle isn't something you'd think neurosurgeons would do. And, generally, they wouldn't — unless it was the special Brain Bike created by Orange County Choppers to benefit Think First and the Christopher Reeves' Foundation.

"Traumatic brain injury is a terrible, terrible condition and our top focus is on prevention," says Wyoming Spine and Neurosurgery's Steven J. Beer, M.D., who was involved with the Brain Bike project. "In the past several years, the trend has been that we see fewer serious brain injuries and that is directly related to increased use of seatbelts, helmets

and more important," says Dr. Beer. "Headaches, back pain, infections, disc abnormalities, arthritis and other conditions can severely impede an individual's ability to perform day-to-day activities and enjoy life.

Beyond the Brain

can endure," Dr. Beer explains. "Here at Wyoming Spine and Neurosurgery, we have both the experience and technology necessary to successfully monitor brain pressure status, administer proper medical care and achieve optimal outcomes."

Although many people think of neurosurgeons as "brain doctors," the fact is that over 75 percent of the treatments Dr. Beer and his colleagues provide involve spinal conditions.

"We offer patients a comprehensive range of modern treatments for the spine," Dr. Beer says. "In some instances, surgery is required to treat these disorders, but many times, we can give patients real relief and improved quality of life with non-operative procedures."

"We're dedicated to staying abreast of the latest developments in spinal care to ensure we can give our patients the treatments they need to eliminate painful spine conditions and reclaim their quality of life."

With locations in Cheyenne, Torrington, Wheatland, and Rawlins, Wyoming and Kimball and Scottsbluff, Nebraska, Wyoming Spine and Neurosurgery is committed to providing convenient, patient-centered care with unparalleled results. To request a consultation or learn more, please call 800-450-4729.

"As baby boomers get older, finding new ways to treat degenerative spinal conditions becomes more and more important..." Dr. Beer

and other protective gear. Accidents can still happen, however, and if a traumatic brain injury occurs, it's absolutely vital to receive appropriate care immediately."

With sophisticated technologies and state-of-the-art equipment approved by the American Association of Neurological Surgeons, Wyoming Spine and Neurosurgery provides patients with the very latest treatments available to overcome traumatic brain injury.

"Brain injuries are unique because the surrounding bone structure of the skull limits the amount of pressure the brain

can endure," Dr. Beer explains. "Here at Wyoming Spine and Neurosurgery, we have both the experience and technology necessary to successfully monitor brain pressure status, administer proper medical care and achieve optimal outcomes."

Actively involved in the development of new products and surgical techniques to improve spine care, Dr. Beer is a chairperson for the Aging Spine Committee and has a special interest in treating spinal degeneration and issues related to the aging of the spine.
